Sep 2019: Repo rate maintained at 5.00 per cent.

Dec 2019: Repo rate maintained at 5.00 per cent.

CHAPTER 1 – OVERVIEW OF 2019 AND OUTLOOK FOR 2020

OVERVIEW OF ECONOMIC DEVELOPMENTS IN 2019

The global economy lost momentum in 2019 because of weak global trade and investment, heightened trade policy uncertainty emanating mainly from trade frictions between the United States (US) and China and lower commodity prices. World output growth therefore slowed to 2.9 per cent in 2019, from 3.6 per cent in 2018, according to the International Monetary Fund (IMF) January 2020 World Economic Outlook (WEO) Update. In light of weaker growth and muted inflation during 2019, central banks across Advanced Economies (AEs) and Emerging Market and Developing Economies (EMDEs) generally loosened monetary policy.

Among AEs, growth in the US moderated amid slowing investment and exports, while Brexit-related uncertainties stymied real GDP growth in the United Kingdom (UK). The Japanese economy, however, registered stronger growth in 2019, despite the increase in the Consumption Tax on October 1, and the destruction caused by Typhoon Hagibis. In EMDEs, growth receded, reflecting lower trade flows, geopolitical tensions and country-specific factors. In India, private consumption slowed, while in China the trade tensions with the US as well as lower demand held growth to just 3.9 per cent, the lowest since 1990. Meanwhile, the decline in commodity prices, oil production cuts and continued international sanctions lowered real output in Russia. In Latin American social tensions also affected economic growth while, in the Caribbean, the economic prospects of Guyana improved as the oil sector developed.

The Central Bank's Quarterly Index of Real Economic Activity (QIEA)¹ shows that domestic economic activity contracted by 1.1 per cent year-on-year in 2019 with a decline in the energy sector (3.6 per cent) and a slight improvement in the non-energy sector (0.5 per cent). The energy sector outcome partly reflects lower oil yields from the country's mature acreages, and the effects of planned and unplanned shutdowns of some energy installations. In the non-energy sector, the

finance, construction and wholesale and retail trade sectors improved moderately in a generally growth-supportive environment of favourable financing conditions and an expansionary fiscal stance. Nevertheless, foreign exchange availability remained a constraint on some business operations.

Inflation in 2019 was generally low, helped by a soft labour market and muted wage growth (**Table 1**). Headline inflation measured 1.0 per cent in 2019, unchanged from the previous year. Core inflation was also steady, with increases for prescription medication and medical services being offset by slower transportation inflation. On the other hand, food inflation receded further in 2019, to 0.6 per cent from 1.1 per cent one year earlier, on account of price declines for fresh fruits and vegetables. On the whole, domestic food prices appeared little affected by international food prices which, according to the Food and Agriculture Organisation food price index, rose by 1.8 per cent in 2019. Meanwhile, available data on retrenchments from the Ministry of Labour and Small Enterprise Development showed that the pace of retrenchments slowed by 16.9 per cent to 1,397 persons, suggesting a slowdown in overall job losses. However, other indicators such as hours worked (-27.8 per cent) and wage growth (unchanged since 2017) point to soft labour market conditions. Additionally, in 2019 job advertisements in the print media were 10.3 per cent less than in 2018.

Higher energy revenues, which outpaced the increase in government spending for FY2018/19, resulted in a much lower fiscal deficit than budgeted. Revised estimates from the Ministry of Finance show that the Central Government accounts registered an overall deficit of \$3.9 billion (2.4 per cent of GDP) in fiscal year (FY) 2018/19. This compares with a fiscal deficit of \$5.7 billion (3.6 per cent of GDP) recorded in FY2017/18 and reflects a much lower deficit than anticipated in the initial and mid-year revised budgets for FY2018/19. Meanwhile, total public sector debt outstanding at the end of September 2019 reached \$121.3 billion, \$2.1 billion more than in September 2018.

1 The Central Bank of Trinidad and Tobago compiles a quarterly index of real economic activity (QIEA) on the basis of industries and establishments that have been classified according to the International Standard Industrial Classification of All Economic Activities, revision 4 (ISIC Rev 4).

The Central Bank kept the Repo rate unchanged at 5.00 per cent in 2019, as it balanced domestic economic considerations with international financial conditions. Domestically, the economy continued on a low-growth adjustment path following shocks in global energy markets in 2015. At the same time, inflation remained low throughout the year, requiring no Central Bank action to control it. Meanwhile, the differential between the US and TT short-term yields – which can influence foreign exchange outflows for investment – remained negative, although by December it had improved by 59.1 per cent to -47 basis points. The judgement of the Bank during the year was that the Repo rate, at 5.00 per cent, was consistent with a neutral monetary policy stance and, considering all factors, was at an appropriate level.

Liquidity in the financial system increased during 2019, as the Central Bank allowed maturing open market bills back into the system given the public sector's heavy domestic financing requirements. Overall, the central government accessed the financial system for \$7.3 billion in

2019 for budget operations and refinancing of maturing bonds. Private sector credit growth was less dynamic and slowed to 4.1 per cent from 5.6 per cent in 2018. Consumer credit, supported by low interest rates, was buoyed by borrowing for mortgages, and refinancing and debt consolidation, but business credit slumped by 4.3 per cent. In December, the government announced the demonetisation of the cotton \$100 note and its replacement by a new polymer \$100 bill.

At the end of 2019, gross official reserves declined to US\$6,929.0 million. The continuous fall in reserves since 2016 signals that the country's use of foreign exchange still routinely exceeds its earnings and, more fundamentally, that external balance has not yet been achieved. The Central Bank's support to the foreign exchange market from reserves in 2019 was \$1.5 billion, approximately the same as 2018. Nevertheless, reserves remain above the benchmark levels of traditional reserve adequacy measures² and at year's end represented import cover of 7.7 months.

2 Traditional reserve adequacy ratios and benchmarks are: import cover (3.0 months), reserves to short term external debt (1.0), reserves to broad money (20.0 per cent).

1 Real GDP growth rates are sourced from the Central Statistical Office.

2 Changes in the Index of Retail Prices (RPI), January 2015 = 100.

3 This represents the average of the four quarters.

4 Includes the external and internal debt of the Central Government, as well as contingent liabilities but excludes Treasury Bills, OMO Bills and Notes, Treasury Bonds and Liquidity Bonds.

5 This is defined as the ratio of external Central Government debt service to exports of goods and non-factor services.

6 International reserves have been revised to include Trinidad and Tobago's reserve position in the IMF. International reserves are defined as external assets that are readily available to and controlled by monetary authorities for direct financing of payments imbalances, for indirectly regulating the magnitudes of such imbalances through intervention in exchange markets and for other purposes. Typically, they include securities, gold, IMF special drawing rights (SDRs), a country's holding of foreign currency and deposits, reserve position in the IMF, and other claims (Balance of Payments Manual 6th Edition Paragraph 6.64).

* For the first quarter of 2019. The growth rates are quarter-on-quarter growth rates of quarterly GDP measured at constant producer prices.

** For the period January to September 2018.

OUTLOOK FOR 2020

The emergence and spread of the corona virus (COVID-19) represents a serious threat to global growth in 2020. On March 11, 2020 the World Health Organisation declared the outbreak a pandemic given its presence in multiple regions. Along with the human costs, the virus has affected global trade, supply and demand across many industries, upended some commodity prices and rattled financial markets. As an indirect impact, oil prices slumped in March as a price war began between Saudi Arabia and Russia following disagreement on oil production cuts to support markets. The COVID-19 is layered upon previously acknowledged risks to the global economy, namely, trade protectionism and geopolitical risks. Global growth in 2020 is therefore likely to fall substantially below projections at the start of the year. The IMF's January 2020 WEO Update of 3.3 per cent global growth in 2020 will be downgraded at the next annual World Bank-IMF meeting in April 2020.

The weaker global economy will undermine the revival of the Trinidad and Tobago economy in 2020. Plummeting international commodity prices can impact the profitability of local energy producers who, in turn, may reduce their operations temporarily. Natural gas and petrochemical output are also expected to reflect the fallout of the unsuccessful results of bpTT's infill drilling programme announced in May 2019 and the closure of YARA's ammonia plant.

The Corona outbreak also threatens activity in the non-energy sector. Containment measures implemented locally, and travel restrictions can curtail activity in most sectors, impacting firms' profitability and employment levels. The

stimulus of government spending on the non-energy sector will also be blunted if government is forced to reduce its capital expenditure because of revenue shortfalls due to the corona virus. Government's revenue in 2020 will be lower than forecast due mainly to the sharp falls in oil and natural gas prices but can also be impaired by lower tax take from domestic companies if their profitability falls. Government projects – and some private sector production – may also be affected because of difficulty in obtaining imported inputs. The government has estimated that the virus- and price war-induced shocks to energy prices will push the projected budget deficit for fiscal 2019/20 to \$8.5³ billion compared to the budgeted \$5.0 billion. Additionally, starting March 18 the government revealed a series of fiscal support measures to ameliorate the economic impact of the virus on the local economy. These included expediting income tax and VAT refunds to individuals and businesses, and grants of up to \$1500 for temporarily unemployed persons. Also, on March 17 the Central Bank reduced the Repo rate by 150 basis points and the reserve requirement on commercial banks by 3 per cent.

The domestic economic environment in 2020 will conduce to low inflation, but higher imported inflation because of curtailed supplies of some products globally could exert upward impetus. The external accounts will deteriorate reflecting the shocks to the global economy and impacts on Trinidad and Tobago's main trading markets, and disruptions to travel and shipping. Gross official reserves are therefore at risk of a sharp fall, but could be shored up by government's intention to withdraw resources from the Heritage and Stabilisation Fund to aid in its response to the effects of the COVID-19 pandemic.

3 Budgeted oil and gas prices have been revised to US\$40.00 per barrel and US\$1.80 per million British Thermal Units (mmbtu) respectively, from US\$60.00 per barrel and US\$3.00 per mmbtu, effective March 10, 2020.

CHAPTER TWO – DOMESTIC ECONOMIC ACTIVITY⁴

QUARTERLY INDEX OF ECONOMIC ACTIVITY

Ahead of the release of official data by the Central Statistical Office (CSO), preliminary Central Bank estimates indicate that domestic economic activity remained subdued in 2019. The Central Bank's Quarterly Index of Real Economic Activity (2012=100)⁵ indicates that economic activity declined by 1.1 per cent in 2019 as output in the energy sector fell by 3.6 per cent and activity in the non-energy sector increased marginally, by 0.5 per cent.

The drop in the energy sector⁶ output emanated from weakness in the upstream and midstream sub-sectors. Natural gas production was flat during 2019, while crude oil production declined by 7.3 per cent. While the operationalisation of bpTT's Angelin project initially provided a boost to natural gas production, the effects of maintenance activity in other segments of the natural gas sub-sector outweighed these gains. Exploration activity also slowed, as rig days and depth drilled declined by 12.7 per cent and 16.6 per cent, respectively. In the midstream sector, as a result of the closure of the Petroleum Company of Trinidad and Tobago (PETROTRIN) refinery in October 2018, refinery throughput fell off by 27.5 per cent, in spite of a 1.5 per cent increase in Liquefied Natural Gas (LNG) production. Meanwhile further downstream, the local petrochemical sector recovered from the downtime experienced in 2018. Total petrochemical output increased by 12.0 per cent, led by output growth of fertilisers (12.4 per cent) and methanol (11.6 per cent).

In a growth-supportive environment characterised by low interest rates and expansionary fiscal policy, the non-energy sector recorded moderate gains during the year. Activity in the Financial and Insurance sector (3.4 per cent) and the Real Estate sector (2.4 per cent) was relatively strong, propelled by continuing growth in the demand for consumer and real estate credit from the commercial banks. Economic activity in the Wholesale and Retail Trade sector⁷ is estimated to have increased by 1.3 per cent. The registration of motor vehicles, the main indicator for the motor vehicle and parts subcomponent of the retail sales index, increased by 4.2 per cent in 2019 mainly on account of an increase of 5.3 per cent in private vehicle registrations, while commercial vehicle registrations rose by 1.0 per cent. Local cement sales, an indicator of activity within the Construction sector, increased marginally, by 0.6 per cent. Meanwhile, economic activity in the Manufacturing sector, where capacity utilization (**Table 2**) was about on par with the previous year, showed a downtick of 0.8 per cent. Transportation and Storage and Electricity and Water sectors recorded declines in 2019. A slowdown in activity within the passenger land transport sub-sector led the Transportation and Storage sector to decline by 0.7 per cent. A severe dry season and slowing energy sector activity, in particular the shutdown of the PETROTRIN refinery, brought about a fall in water production and electricity generation of 2.6 per cent.

4 Data on Gross Domestic Product (GDP) for whole-year 2019 is not yet available from the Central Statistical Office (CSO). In the absence of CSO estimates, the FY2020 Budget Statement projected domestic real GDP growth of 0.9 per cent year-on-year, in line with World Bank estimates (See <https://www.finance.gov.tt/wp-content/uploads/2019/10/Budget-Statement-2020-Amended-web.pdf>, page 20). Current estimates from the CSO indicate that the domestic economy declined by 0.2 per cent in 2018 following contractions of 6.3 per cent in 2016 and 2.3 per cent in 2017.

5 The Bank compiles a Quarterly Index of Real Economic Activity (QIEA) to gauge short-term economic activity. The industry classification conforms to the International Standard Industrial Classification Revision 4 (ISIC Rev.4). The CSO is the source of GDP data in Trinidad and Tobago. The QIEA differs from the CSO's measure of GDP in terms of methodologies and coverage. The QIEA is based on production indicators, excludes price effects and does not comprehensively cover all sub-industries measured by the CSO. In 2019, the QIEA was rebased from a 2010 to 2012 base year and the classification system was migrated from the Trinidad and Tobago System of National Accounts to the International Standard Industrial Classification, Revision 4. Under this classification, the output of crude oil and natural gas are included in Mining and Quarrying, the production of LNG, NGLs and petrochemicals are included in Manufacturing, and the retail sale of automotive fuels is included in Wholesale and Retail Trade. For comparison purposes, the sectoral breakdown of real economic activity into Energy and Non-energy, presented previously is maintained.

6 Energy sector activity comprises the production of crude oil and natural gas, LNG, NGLs and petrochemicals and the retail sale of automotive fuels.

7 Energy sector activity comprises the production of crude oil and natural gas, LNG, NGLs and petrochemicals and the retail sale of automotive fuels.

TABLE 2
MANUFACTURING SECTOR CAPACITY UTILISATION RATE

	2015	2016	2017	2018	2019
Manufacturing ¹	68.1	68.2	68.2	64.5	64.4
Food, Beverages and Tobacco Products	77.3	74.0	73.5	69.3	69.8
Textiles, Clothing, Leather, Wood, Paper and Printing	63.3	64.9	62.5	59.6	60.1

Other Manufactured Products	43.9	65.0	66.1	64.8	64.5

Source: Central Bank of Trinidad and Tobago

- 1 The sectoral breakdown was amended in line with the manufacturing sector's presentation following the migration of the Quarterly Index of Real Economic Activity (2012 =100) to the International Standard Industrial Classification, Revision 4 (ISIC Rev.4).

CHAPTER THREE – LABOUR MARKET

UNEMPLOYMENT

The latest official unemployment statistics from the CSO indicate that the unemployment rate declined during the first nine months of 2018. The unemployment rate fell to 4.1 per cent from 5.0 per cent in the corresponding period of 2017, mainly because of a reduction in the labour force (**Table 3**). Although the number of persons without jobs fell by 6.0 thousand persons to 25.7 thousand, the number of persons with jobs (605.4 thousand persons) remained the same as in the first nine months of 2017. However, the labour force fell by 6 thousand persons and the participation rate⁸ edge downward to 58.9 per cent during the first nine months of 2018.

The number of persons with jobs remained unchanged as employment gains in some sectors were matched by job losses in other sectors. Higher employment levels mainly occurred in the finance, insurance, and real estate services sector (4.6 thousand jobs), the agriculture sector (0.8 thousand jobs), and the wholesale and retail trade sector (0.6 thousand jobs). On the other hand, the largest job losses were in the transport, storage and communication sector (4.9 thousand jobs), the manufacturing (including mining and quarrying) sector (2.2 thousand jobs), and the

construction (including electricity and water) sector (0.7 thousand jobs) (**Table 4**).

Supplemental data for 2019 suggest that labour market slack⁹ continued into 2019. Data on retrenchment notices¹⁰ filed at the Ministry of Labour and Small Enterprise Development (MLSED) showed that 1,397 persons were retrenched in 2019, down from 1,681¹¹ in 2018. In 2019, most retrenchments occurred in the manufacturing (276 persons), construction (262 persons), and energy (227 persons) industries. Another supplemental indicator monitored by the Bank, the number of job advertisements published in the print media¹² declined by 10.3 per cent year-on-year, perhaps indicative of diminished labour demand. The lack of dynamism in the labour market is backed up by fewer man hours worked¹³ during the first three quarters of 2019. In the non-energy sector, hours worked decreased by 5.4 per cent year-on-year. However, when both the non-energy and energy sectors are considered, hours worked declined more sharply, by 27.8 per cent year-on-year. Although in the energy sector there were fewer hours worked in almost all the major sub-industries, the decline in hours worked mainly reflected the closure of the PETROTRIN refinery in November 2018.

-
- 8 The CSO defines the labour force participation rate as the proportion of the non-institutional population that is economically active, that is, the proportion of the working age population (15 years and older) that is either employed or actively seeking employment.
 - 9 The amount of 'slack' in the economy is a measure of the quantity of unemployed resources. It represents the quantity of labour and capital that could be employed productively, but instead, remains idle.
 - 10 Retrenchment refers to the termination of employment of a worker at the initiative of an employer for the reason of redundancy according to the Retrenchment and Severance Benefits Act (No. 32 of 1985). The Act states that, "where an employer proposes to terminate the services of five or more workers for the reason of redundancy he shall give formal notice of termination in writing to each involved worker, to the recognised majority union and to the Minister of Labour". As such, if fewer than five employees are terminated, employers are not obligated to report to the Ministry. This indicator for job separation is therefore limited insofar as it only includes registered retrenchment notices, and does not capture other forms of job separation, especially the non-renewal of contracts of temporary or short-term workers. Furthermore, reports of job losses at establishments cannot be equated with an equal rise in the unemployment rate. Data on the labour market are not collected from firms and other establishments but from households via the conduct of the Continuous Sample Survey of Population (CSSP). Moreover, persons who have been retrenched or who have lost their jobs otherwise (expired contract, retired, etc.) and have not sought re-employment during the reference period are not classified as unemployed.
 - 11 Not included in the retrenchment notices are the 5,000+ Petrotrin workers who were affected by the closure of the oil refinery at the end of November 2018.
 - 12 This indicator is constructed by the Central Bank using the number of employment vacancies advertised in the Daily Express, Newsday and Guardian newspapers.
 - 13 'Man hours worked' refers to changes in the Index of Hours Worked, which is produced by the Central Statistical Office and is based on data for the manufacturing, energy and electricity and water sectors.

WAGES

Wage growth remained moderate during 2019. Collective agreements registered with the Industrial Court showed that the median wage increase measured 3.0 per cent in 2019, unchanged since 2017 (**Table 5**). Wage

increases for 2019 ranged between 0.0 and 5.0 per cent compared with a range of 2.0 to 7.0 per cent in 2018. The finance, insurance, real estate and other business services sector received the highest average wage increase (3.88 per cent), while wages within the energy sector held steady. The Index of Average Weekly Earnings (AWE)¹⁴

14 The Index of Average Weekly Earnings, which is computed by the Central Statistical Office, is based on surveyed companies' employment and wage bill. The average weekly earnings is calculated as the earnings (total amount paid to employees) divided by the number of employees.

showed that nominal wages in the non-energy sector grew marginally, while wages in the energy sector experienced a large decline. In the non-energy sector, the Index of AWE increased by 1.7 per cent year-on-year during the first three quarters of 2019. However, when the energy sector is included, the Index of AWE

decreased by 33.6 per cent over the reference period; average energy sector wages were particularly affected by the closure of the PETROTRIN refinery. Wages in the exploration and production of oil and natural gas also decreased by 8.7 per cent (**Appendix Table A.10**).

OTHER LABOUR MARKET DEVELOPMENTS

In 2019, there were two important developments in the labour market. Firstly, between May 31, 2019 to June 14, 2019, the Government of Trinidad and Tobago undertook a registration exercise whereby 16,523 Venezuelan migrants (16 years and over) were

registered, allowing them the legal right to work in Trinidad and Tobago for up to one year with a re-assessment every six months. All registered persons have access to free healthcare, but not to educational and social security benefits. Secondly, from December 1, 2019, the minimum wage was increased from \$15.00 an hour to \$17.50 an hour.

CHAPTER FOUR – PRICES

INFLATION

Inflation remained stable throughout 2019 and averaged 1.0 per cent, unchanged from 2018. While core inflation edged up in 2019, food inflation slowed (**Table 6 and Appendix Table A.12**).

Core inflation averaged 1.1 per cent throughout 2019, up from 1.0 per cent in 2018. Core inflation moved from 1.6 per cent in January 2019 to 0.6 per cent in December 2019, with most of the upward impetus coming from the health sub-index, which increased to 5.5 per cent due to faster price increases for prescription medication and medical services. The transport sub-index averaged an increase of 1.4 per cent in 2019 compared with 1.9 per cent in 2018. This slowdown was driven mainly by declines in the price of foreign-used motor vehicles and the phasing out of the base effect from the increase in fuel prices in October 2018. Core inflation was further impacted by the slowdown in the housing sub-index, which decelerated from 2.4 per cent in January 2019 to 0.7 per cent in December 2019, through slower increases to home ownership costs.

Food inflation slowed in 2019, averaging 0.6 per cent, compared to 1.1 per cent in the previous year. Food inflation moved from 0.5 per cent in January 2019 to -1.0 per cent at the end of the year, mainly reflecting downward movements in the vegetable sub-index. Vegetable prices reached their highest of 10.1 per cent in August 2019, before declining progressively to -9.3 per cent by December 2019. Food prices were further contained by persistent declines in the fruit sub-index throughout the year, as well as slowed growth in the milk, cheese and eggs sub-

index. On the whole, domestic food prices appeared little affected by international food prices which, according to the Food and Agriculture Organisation food price index, rose by 1.8 per cent in 2019

PRODUCERS' PRICES

The Producer Prices Index (PPI) increased 0.6 per cent year-on-year in 2019. The slight uptick in the PPI reflected modest increases in most sub-indices. Notably, there was a 1.6 per cent increase in the drink and tobacco sub-index owing to a 2.3 per cent increase in tobacco prices. The increase in prices was consistent with an increase in international prices, as several countries levied higher taxes on tobacco-based goods in 2019. In contrast, the chemicals and non-metallic products sub-index experienced a marginal decline because of lower cement prices (**Appendix Table A.13**).

BUILDING MATERIALS PRICES

Building material prices were subdued in 2019, as the Index of Retail Prices of Building Materials (BMI) rose by 1.0 per cent during the year, following an increase of 4.7 per cent in 2018. The small increase was consistent with the measured pace of economic activity in the construction sector. All sub-indices of the BMI were higher when compared to 2018 levels with the exception of the finishing, joinery units and painting and external works sub-index, which declined marginally. Among the other sub-indices, notable increases were recorded in the plumbing and plumbing fixture sub-index (3.2 per cent) and the site preparation, structure and concrete frame sub-index (1.5 per cent).

CHAPTER FIVE – FISCAL OPERATIONS

FISCAL OPERATIONS

The Central Government accounts registered an overall deficit of \$3.9 billion (2.4 per cent of GDP) in FY2018/19 (**Table 8**). This compares with a fiscal deficit of \$5.7 billion (3.6 per cent of GDP) recorded in FY2017/18 and reflects a much lower deficit than anticipated in the initial and mid-year revised budgets for FY2018/19. The smaller year-on-year deficit was on account of higher revenue, which was supported in part by the tax amnesty¹⁵ implemented in June 2019. Meanwhile, the non-energy fiscal deficit reached \$18.7 billion as the overall increase in spending surpassed the growth in non-energy revenue.

Revised estimates show that for FY2018/19 Central Government total revenue amounted to \$46.6 billion, roughly \$3.4 billion higher than the previous fiscal year. Energy revenue rose by 34.1 per cent to \$14.8 billion owing to higher natural gas production¹⁶. At the same time, higher energy revenue was partially offset by lower non-energy receipts which declined by 1.6 per cent

to \$30.8 billion from \$31.3 billion in FY2017/18. The fall in non-energy receipts was primarily driven by lower non-tax revenue. Collections from taxes on goods and services and international trade also fell over the period. Lower net Value Added Tax (VAT) collection¹⁷ was responsible for the decline in revenue from taxes on goods and services. Meanwhile, capital revenue increased over the period reaching \$972.8 million at the end of FY2018/19 owing to the sale of CL Financial assets¹⁸.

Aggregate expenditure reached \$50.5 billion, an increase of approximately \$1.6 billion from FY2017/18. This was on account of higher spending on wages and salaries, interest payments and transfers and subsidies. Notably, spending on transfers and subsidies increased to \$27.2 billion from \$25.4 billion year-on-year in FY2017/18, partly due to costs associated with the closure of PETROTRIN. Meanwhile, capital spending amounted to \$3.6 billion in FY2018/19 slightly up from \$3.5 billion in FY2017/18.

15 The tax amnesty began in mid-June 2019 and continued for a period of three and a half months ending on September 30, 2019. The amnesty resulted in additional tax revenue of TT\$2.4 billion.

16 Natural gas production averaged 3,594.4 million cubic feet per day (mmcf/d) in FY2018/19 compared to 3,554.4 mmcf/d in FY2017/18.

17 In FY2018/19 VAT Refunds amounted to \$3.3 billion compared to \$1.9 billion recorded in the previous fiscal year.

18 Capital revenue was bolstered by proceeds from the sale of other assets which included: (i) dividends received from CLICO Investment Bank; (ii) dividends paid to CLICO by Republic Bank and transferred to the Government to settle outstanding liabilities; (iii) transfer of funds from CLICO Investment Bank to the Government on account of the compulsory liquidation of managed funds under the Islamic Banking Services loan portfolio and (iv) settlement of liabilities to the Government by Colonial Life Insurance Company.

PUBLIC SECTOR DEBT

Total public sector debt outstanding at the end of September 2019 amounted to \$121.3 billion, compared to the \$119.2 billion registered in September 2018 (**Table 11**). Net public sector debt, which excludes debt issued for sterilisation purposes (open market operations), increased by 8.0 per cent to \$103.2 billion (63.2 per cent of GDP). During the fiscal year, the Central Government borrowed both domestically and externally for budgetary support and to refinance existing obligations. Meanwhile, the Central Bank allowed net maturities of OMOs back into the financial system.

Central Government increased its domestic borrowing during FY2018/19. Domestic debt, excluding sterilised securities increased to \$47.0 billion in September 2019 from \$42.3 billion in September 2018 (**Appendix Table A.17 (B)**). Under the Development Loans Act, Central Government borrowed \$6.3 billion in FY2018/19, relatively unchanged from FY2017/18. These borrowings included bonds underwritten by First Citizens Bank totalling \$4.3 billion, ANSA Merchant Bank amounting to \$1.1 billion, and Republic Bank Limited, \$940.0 million. These bonds increased the amount outstanding under the Development Loans Act to

\$41.3 billion as at September 2019¹⁹ (**Table 12B**). An additional \$1.4 billion in debt management bills were contracted under the Treasury Bills Act. Regarding principal repayments, roughly \$2.3 billion was allocated for bonds and loans contracted under the Development Loans Act, while \$470.4 million and \$18.7 million were allocated for the repayment of CLICO and HCU zero coupon bonds, respectively.

Central Government external debt amounted to US\$3,939.4 million at the end of September 2019 (**Appendix Table A.17 (A)**). Disbursements from external creditors amounted to US\$365.5 million over the reporting period. Notably, US\$220.0 million was disbursed by the Corporación Andina de Fomento (CAF) in support of the medium-term fiscal consolidation strategy and the Roads and Bridges Programme (**Table 12A**). Additionally, external debt contracted included US\$76.8 million from the Unicredit Bank Austria for the construction of the Point Fortin Hospital, as well as US\$68.7 million

for existing project-related loans from the Inter-American Development Bank (IDB). External debt service payments amounted to US\$292.4 million of which US\$125.3 million was geared towards principal repayments.

Contingent liabilities increased by \$1.4 billion to \$30.0 billion at the end of September 2019. New borrowings for FY2018/19 by Statutory Bodies and State-owned Enterprises included debt contracted by PETROTRIN and the National Infrastructure Development Company (NIDCO) totalling \$1.3 billion and \$914.9 million, respectively. Over the period, the Urban Development Corporation of Trinidad and Tobago (UDECOTT) also borrowed \$1.0 billion for various works, which included the construction of the Arima and Sangre Grande Hospitals as well as the renovation of the Port-of-Spain General Hospital. Meanwhile, PETROTRIN and Caribbean Airlines Limited (CAL) refinanced maturing obligations over the period (**Table 12A**).

19 The Act currently sets a borrowing limit of \$45.0 billion.

CHAPTER SIX – MONETARY AND FINANCIAL DEVELOPMENTS

MONETARY POLICY

The Monetary Policy Committee (MPC) of the Central Bank held its main policy rate, the Repo rate, unchanged at 5.00 per cent in 2019 balancing domestic economic considerations with international financial conditions. The domestic economy continued in a recovery mode, with uneven progress across sectors, while inflation remained historically low. Regarding financial conditions, the MPC considered that a large negative differential between TT and US short-term interest rates could potentially encourage capital outflows for investment. However, during the year short-term rates in the US generally declined so that by the end of 2019 the differential had fallen substantially. The judgment of the Bank during the year was that the Repo rate, at 5.00 per cent, was on balance at an appropriate level.

Liquidity levels in the domestic banking system increased during 2019. Commercial banks' holdings of excess reserves rose to a monthly average of \$4,005.6 million from \$3,282.1 million in 2018²⁰. Net domestic fiscal injections (NDFIs) – usually considered the main driver of liquidity – amounted to a net withdrawal of \$1,844.7 million in 2019, a reversal from the \$10,592.0 million in injections over 2018. Over late November and December 2019, receipts from a \$1,600.0 million bond with a 15-year tenor, as well as end of quarter tax receipts caused fiscal operations to result in net withdrawals from the financial system. In addition, although not a liquidity absorption tool, Central Bank sales of foreign exchange to authorised dealers indirectly removed \$10,057.0 million from the system in 2019, roughly equal to the amount removed in 2018. In contrast, through the net maturities of OMOs totaling \$10,439.4 million, the Central Bank injected liquidity into the financial system. Overall, the higher average level of excess liquidity over 2019 brought down activity on the interbank market. Interbank activity averaged \$108.0 million daily in 2019, compared with a daily average level of \$114.5 million in 2018. The repurchase facility was not accessed over 2019.

In December, the government announced the demonetisation of the cotton \$100 note and its replacement by a new polymer \$100 bill.

The TT-US short term differential remained in negative territory over the course of 2019. The 91-day Treasury bill rate decreased by 22 basis points to 1.08 per cent at the end of 2019, while the 365-day Treasury bill rate decreased by 46 basis points to reach 2.29 per cent. However, mainly neutral monetary policy from the US Federal Reserve (Fed) over 2019 and bouts of safe haven inflows resulted in decreasing short-term rates in the US. Thus, while the TT-US 91-day Treasury rate differential remained in negative territory, there was an improvement from -115 basis points at the end of 2018 to -47 basis points by the end of 2019.

The commercial banking spread declined in 2019 owing to lower lending rates. The commercial banks' weighted average lending rate decreased by 29 basis points between December 2018 and December 2019 to reach 7.72 per cent, influenced by higher excess liquidity in the financial system and the competitive lending environment. Meanwhile, the weighted average deposit rate rose by 2 basis points to 0.67 per cent over the same period. The banking spread thus narrowed 31 basis points over the year to reach 7.05 per cent in December 2019. Similarly, the weighted average interest rate on outstanding mortgage loans decreased to 5.84 per cent by December 2019, reflecting a 21 basis point decline since December 2018. Consistent with the steadiness of the Repo rate over 2019, the median prime lending rate remained at 9.25 per cent.

The growth in private sector credit granted by the consolidated system moderated over 2019 to an average of 4.1 per cent compared to 5.6 per cent one year earlier. While consumer and real estate lending remained robust throughout 2019, weak business lending dragged overall credit growth downwards.

20 Notably, currency in active circulation declined by 39.8 per cent between December 2018 and 2019 owing to redemptions of \$100 cotton notes, occurring as part of a demonetisation exercise. Liquidity and currency in active circulation tend to move in opposite directions.

Business lending remained anaemic in 2019 and declined by 4.3 per cent compared to growth of 2.4 per cent in 2018. Disaggregated data show an average decline of 7.9 per cent in lending to the finance, insurance and real estate sector due in part to a falloff in real estate lending²¹. On the other hand, lending to the manufacturing sector rose by an average of 7.9 per cent on account of increased lending to the food, drink and tobacco and chemicals and non-metallic minerals sub-sectors. Similarly, loans to the wholesale and retail trade sectors expanded by 4.3 per cent.

Consumer credit held strong throughout 2019. Lending to consumers expanded by an average of 6.4 per cent over 2019, slightly lower than the 6.7 per cent recorded in 2018. Lending for debt consolidation and refinancing continued to drive consumer credit, expanding at an average rate of 16.8 per cent and 9.9 per cent, respectively. Another major lending category, motor vehicles, also expanded in 2019 (3.2 per cent) albeit at a slower pace than in 2018. Further disaggregation of this category showed lending for used cars was elevated, averaging 11.2 per cent throughout 2019 while loans for new motor vehicles was lethargic, declining by an average of 0.3 per cent. Loans for credit cards remained buoyant, expanding by an average of 5.1 per cent in 2019.

Real estate mortgage lending presented robust growth throughout 2019. On average, real estate mortgage lending grew by 9.4 per cent over 2019 compared to 7.9 per cent one year earlier. Lower interest rates offered on mortgages continued to be the main impetus behind the increase in real estate lending. The interest rate on new residential real estate mortgages edged down to 4.67 per cent in December 2019, reflecting a 6 basis point decline since December 2018. Residential real estate mortgages for existing homes grew by 17.3 per cent, while loans for new houses and land expanded by 7.0 per cent and 5.4 per cent, respectively. After five consecutive quarters of decline, lending for renovation expanded by 3.5 per cent and 5.3 per cent in September and December 2019.

Monetary aggregates remained weak in 2019. Data to December 2019 indicated that the

monetary aggregates were impacted by the demonetisation of the TT\$100 cotton note in December. As the TT\$100 note was replaced with a new polymer \$100 note, currency in active circulation declined by 39.8 per cent year-on-year. On the other hand, as previously un-banked individuals opted to join the banking system, there was a small increase in demand deposits (3.3 per cent year-on-year) following declines since August 2019. M1-A declined by 4.3 per cent year-on-year due in part to the large falloff in currency in active circulation. Growth in M2 was marginal in December 2019 and can be attributed to the expansion in time and saving deposits.

FOREIGN EXCHANGE MARKET

Despite increased foreign exchange inflows, the market for foreign exchange remained tight throughout 2019. Increases were recorded in both authorised dealers' purchases from the public (4.5 per cent) and their sales to the public (4.6 per cent). Purchases of foreign exchange from the public by authorised dealers reached US\$4,285.6 million. Approximately 67.8 per cent of purchases originated from the energy sector, which remains the main source of supply to the market. Improved energy sector performance over 2019 resulted in a 6.0 per cent increase in inflows relative to 2018.

Sales of foreign exchange to the public by authorised dealers amounted to US\$5,939.8 million in 2019. While credit cards absorbed the largest share of all sales (28.5 per cent), retail and distribution (24.4 per cent), energy companies (11.7 per cent), manufacturing (8.2 per cent), and automobile companies (5.8 per cent) made up the bulk of the remainder of foreign exchange sales. The Central Bank's support to the market amounted to US\$1,504.0 million in 2019, almost identical to the level of support in 2018. The weighted average TTD/USD selling rate appreciated slightly from TT\$6.7861/US\$1 in December 2018 to TT\$6.7791/US\$1 in December 2019.

21 This includes real estate agents, real estate developers, real estate valuers and appraisers, and real estate services not elsewhere classified.

CHAPTER SEVEN – CAPITAL MARKETS

STOCK MARKET

The domestic stock market observed a notable improvement over 2019, supported by the strong performances of the Cross Listed Index (CLI) and the All T&T Index (ATI) (Figure 1). The major Composite Price Index (CPI) expanded by 12.7 per cent, while total stock market capitalisation ended 2019 13.3 per cent higher, at \$143.5 billion. The CPI was buoyed by a 19.0 per cent jump in the CLI, reflecting robust performances by most of the regionally listed firms. In addition, the ATI registered a 9.6 per cent increase, arising from solid performances by some locally domiciled firms. The domestic market performance in 2019 surpassed the outturn in 2018 when the CPI improved by just 2.7 per cent, boosted by a 12.2 per cent advance in the CLI, while the ATI declined by 1.4 per cent. In comparison, the major regional stock exchanges saw mixed performances over 2019. The Jamaican Stock Exchange (JSE) reported a robust 34.3 per cent expansion, while the Barbados Stock Exchange fell by 9.2 per cent decline over the year.

FIGURE 1
TRINIDAD AND TOBAGO STOCK INDICES

Source: Trinidad and Tobago Stock Exchange

Domestically, most of the sub-indices advanced in 2019 (Figures 2 and 3). The Banking sub-index gained 15.5 per cent, driven by growth in the share price of First Citizens Bank Limited (FIRST), National Commercial Bank Financial Group Limited (NCBFG), and Republic Financial Holdings Limited (RFHL). The Manufacturing I sub-index expanded by 15.3 per cent, largely

supported by a 30.3 per cent increase in the share price of the West Indian Tobacco Company Limited following its successful 3:1 stock split in November 2019. On the other hand, the Manufacturing I sub-index was negatively impacted by a 50.0 per cent decline in Guardian Media Limited (GML) as a result of a challenging and evolving advertising environment and a contraction in advertising spending. Other sub-indices to witness positive movements were Conglomerates (14.3 per cent), Trading (11.2 per cent) and Non-Banking Finance (6.6 per cent). The Trading sub-index was supported by an impressive 125.3 per cent increase in the share price of LJ Williams Limited (LJWB), driven by strong performance and resilience in the company’s various business segments. The sub-indices posting declines over 2019 were Property (2.7 per cent), Energy (17.7 per cent), and Manufacturing II (26.2 per cent). The decline in the Energy sub-index was driven primarily by Trinidad and Tobago NGL (TTNGL), which was challenged by competition from growing volumes of US shale gas, downtime at Atlantic LNG, reduced natural gas volumes to Point Lisas and higher feedstock costs. Additionally, the fall in the Manufacturing II sub-index was due to a 26.7 per cent decline in the Trinidad Cement Limited (TCL) share price, which continues to be impacted by lower demand locally and in other key markets.

FIGURE 2
TRINIDAD AND TOBAGO STOCK MARKET SUB-INDICES 2019

Source: Trinidad and Tobago Stock Exchange

FIGURE 3
TRINIDAD AND TOBAGO INDIVIDUAL STOCK INDICES, 2019

Source: Trinidad and Tobago Stock Exchange

While the value of securities traded on the domestic exchange during 2019 was lower, the volume traded was higher. A total of 76.9 million shares were exchanged at a value of roughly \$1,102.3 million during 2019. Conversely, in 2018, 72.3 million shares were exchanged at a value of \$1,148.4 million. Volume traded was dominated by the Non-Banking Finance sub-index which accounted for 42.9 per cent, or roughly 32.9 million shares. JMMB Group Limited (JMMB) accounted for 56.3 per cent of the Non-Banking Finance sub-index trade volume. Trade value was led by the Banking sub-index (29.5 per cent or \$325.4 million) while the largest value traded for an individual stock occurred for TTNGL (16.3 per cent or \$179.1 million).

PRIMARY DEBT MARKET

Provisional data suggest that activity on the primary debt market declined during 2019 (Figure 4 and Table 13). The market observed 17 primary issues at a value of approximately

\$11.3 billion, compared to 23 primary issues at a value of roughly \$14.4 billion in 2018. The Central Government continued to be the principal borrower issuing 10 bond facilities, all by private placement, totalling \$7,285.4 million for the purpose of budget support and the repayment and refinancing of existing and maturing Government bonds. Two state enterprises, the Home Mortgage Bank (HMB) and the Telecommunication Services of Trinidad and Tobago Limited (TSTT), accessed the market in 2019, issuing six debt facilities totalling \$2,999.6 million. Lastly, only one private sector entity accessed the market, financing US\$150.0 million or TT\$1,015.7 million for general corporate purposes and strategic initiatives. In comparison, during 2018 the Central Government issued eight bonds at \$4,740.0 million, five state enterprises raised roughly \$4,764.0 million, four private sector entities raised \$891.2 million, and the National Investment Fund Holding Company Limited (NIFHCL) publicly sold three bonds for a total of \$4.0 billion.

CENTRAL GOVERNMENT SECONDARY BOND MARKET, YIELD CURVE²² AND BOND INDEX

Trading activity on the secondary government bond market weakened during 2019 (Figure 5). During the year, 55 trades occurred at a face value of roughly \$182.0 million, compared to 57 trades at \$318.1 million in 2018. Moreover, since the listing of the three NIFHCL bonds in September 2018, the secondary corporate bond market continued to record activity. Over 2019, the corporate bond market observed 118 trades at a face value of \$46.7 million.

Compared to a general upward shift in the Central Government yield curve over 2018, the yield curve displayed mixed movements in 2019 (Figure 6). Over the year, the elevated excess liquidity levels in the banking system placed downward pressure on the short-term Treasury rates. The 3-month rate dropped by 22 basis points to 1.08 per cent, the 6-month rate fell by 38 basis points to 1.47 per cent, the 1-year rate declined by 46 basis points to 2.29 per cent, and the 2-year rate plunged 54 basis points to 2.56 per cent. On the other hand, some medium to long-term rates observed upward movements, likely due to some Central Government borrowing activity occurring within the tenor space. As such, the 10-year rate increased by 12 basis points to 4.54 per cent and the 15-year rate increased by 17 basis points to 5.27 per cent. Conversely, rates on the very long-term tenors greater than 19-years witnessed some declines and flattening. In terms of the Central Government bond index, the Price Index declined marginally by 0.8 per cent, while the Total Return Index improved by 5.9 per cent.

FIGURE 5
ANNUAL SECONDARY GOVERNMENT DEBT SECURITY ACTIVITY

FIGURE 6
TRINIDAD AND TOBAGO GOVERNMENT YIELD CURVE

Source: Central Bank of Trinidad and Tobago

22 The TT Treasury Yield curve was launched in September 2014 by the Central Bank. The curve is based on data from Reserves and Domestic Market Management, contributor market reads, and the Stock Exchange Secondary Government bond market. The curve is intended for use as a benchmark for government securities.

MUTUAL FUNDS INDUSTRY

During 2019, aggregate funds under management increased by 6.6 per cent year-on-year to \$47,146.4 million, as a result of growth in all the fund types²³ (Figure 7). The industry was supported by a 23.2 per cent increase in Money Market funds to \$11,764.1 million, an 8.5 per cent increase in Equity funds to \$7,017.0 million, and a negligible 0.4 per cent increase in Income funds to \$27,973.8 million. Additionally, funds classified as ‘Other’²⁴, which represents the smallest fund group, increased by 11.9 per cent to \$391.5 million. In terms of currency profile, TT dollar funds expanded by 7.5 per cent to \$38,238.5 million, while foreign currency funds improved by 2.7 per cent to a TT dollar equivalent of \$8,907.9 million.

The increase in aggregate funds under management was supported by \$1,348.4 million in net sales. Overall, the industry witnessed \$16,760.1 million in sales and \$15,411.8 million in redemptions over the period. The aggregate net sales position was primarily driven by \$2,107.4 million in net sales in Money Market funds, while funds classified as ‘Other’ experienced \$13.9 million in net sales. The substantial net sales position in money market funds suggests that during periods of elevated excess liquidity in the banking system, investors are seeking higher returns while guaranteeing

their principal investment through the money market funds fixed net asset value (NAV) structure. Conversely, redemptions were observed in Income funds (\$734.8 million) and Equity funds (\$38.2 million). In terms of currency profile, the increase in aggregate net sales was supported by \$1,548.9 million in sales to TT dollar funds, while foreign currency funds experienced \$200.5 million in net withdrawals, arising largely from foreign currency Income (-\$499.5 million) and Equity (-\$28.8 million) funds. However, foreign currency Money Market funds observed \$328.5 million in sales.

FIGURE 7
MUTUAL FUNDS – AGGREGATE FUND VALUE

Source: Central Bank of Trinidad and Tobago

23 Aggregate funds under management refer to mutual fund information collected by the Central Bank of Trinidad and Tobago, including funds managed by the Trinidad and Tobago Unit Trust Corporation, Royal Bank Trinidad and Tobago, Republic Bank Limited and First Citizens Bank Limited.

24 Funds classified as ‘Other’ represent high yield funds and retirement funds.

CHAPTER EIGHT – INTERNATIONAL TRADE AND PAYMENTS

(Data in this section are in US dollars unless otherwise indicated)

BALANCE OF PAYMENTS

Trinidad and Tobago's external accounts recorded an overall deficit of \$676.1 million (3.7 per cent of GDP) over the period January to September 2019 (**Table 14A and Appendix Table A.33 (A)**). At the end of September 2019, gross official reserves amounted to \$6,898.9 million or 7.7 months of prospective imports of goods and services. The current account surplus widened during the first nine months of 2019 buoyed by improvements in the services and income accounts. Meanwhile, the financial account recorded a net outflow, primarily reflective of transactions in portfolio investment.

Despite the decline in export earnings, the current account surplus grew to \$1,151.4 million (6.3 per cent of GDP) over the review period, as a result of reduced deficits on the services and primary income accounts. Preliminary estimates suggest a fall in energy exports of 26.2 per cent year-on-year to \$5,134.0 million, indicative of price declines across most energy commodities²⁵, coupled with a reduction in the volume of energy exports. In particular, following the closure of the state-owned oil refinery in November 2018, refined products exhibited the most significant year-on-year fall-off (78.4 per cent), followed by NGLs (26.1 per cent), petrochemicals (18.2 per cent) and LNG (13.6 per cent). Partially offsetting this outturn was growth in non-energy exports, with manufactured products and capital goods accounting for the most significant earnings. More specifically, iron and steel materials represented the largest portion of manufactured goods exports. Meanwhile, concomitant with lower refining activity, there was a contraction in total imports. In addition, other imports marginally declined by 2.0 per cent (year-on-year) due to reduced imports of manufactured goods.

The deficit on the services account narrowed to \$749.9 million (4.1 per cent of GDP) in the nine months to September 2019, underpinned by an

improvement in the other business services account. Notably, other business services recorded a smaller deficit of \$467.4 million, 48.9 per cent lower year-on-year, as domestic residents reduced their imports of technical, trade-related and other business services. Meanwhile, the travel account surplus widened by \$7.9 million primarily on account of a reduction in spending by locals abroad. The surplus was further improved by \$2.1 million in spending by visitors to Trinidad and Tobago. With regards to the income accounts, the primary income account registered a smaller deficit largely owing to lower dividend and interest payments by energy companies. Concurrently, the secondary income account recorded a surplus of \$20.0 million in the first nine months of 2019, a reversal from a deficit of \$102.7 million registered in the same period in 2018. Lower private outbound transfers were largely responsible for this improved outturn.

The financial account recorded a net outflow of \$705.2 million in the first nine months of 2019, larger than the net outflow of \$599.4 million registered over the same period one year earlier. Portfolio investment primarily contributed towards the overall net outflow on the financial account, however, it was partially offset by a net inflow from other investment²⁶. More specifically, the uptick in portfolio assets was largely due to increases in both short-term (money-market instruments) and long-term (bonds and notes) foreign securities held by financial institutions and energy companies. Meanwhile, the decline in portfolio liabilities stemmed from a reduction in long-term debt securities owed abroad.

Financial flows in the other investment account recorded a net inflow of \$322.7 million over the reference period. Other investment liabilities rose on account of increases in loans incurred by energy sector companies and banks with non-residents as well as higher accounts payable. Simultaneously, the growth in other investment assets was also supported by higher accounts receivable and loans issued to non-residents by

25 Over the period January to September 2019, West Texas Intermediate crude oil fell by 14.7 per cent year-on-year, while Henry Hub natural gas price declined by 10.9 per cent year-on-year.

26 Other investment comprises currency and deposits, loans, trade credit and advances, other accounts receivable/payable and special drawing rights (liabilities).

domestic financial institutions. During the nine-month period, movements in direct investment assets and liabilities resulted in a net outflow of \$57.0 million. The increase recorded in direct investment liabilities (direct investment in Trinidad and Tobago by foreign investors) was largely attributable to the purchases of shares in a local financial holding company by a regional investor, coupled with higher reinvestment of earnings. Meanwhile, direct investment assets increased due to greater reinvestment of earnings to foreign direct investors and intercompany lending.

At the end of 2019, gross official reserves amounted to \$6,929.0 million equivalent to 7.7 months of prospective imports of goods and services. This was \$646.1 million lower than at

the end of 2018, which suggests that the external accounts registered an overall deficit over the year. Although international reserves remained above traditional measures of adequacy²⁷, it continued to deteriorate over the 12-month period as the increase in outflows outstripped the increase in inflows. Over the reference period, inflows to reserves amounted to approximately \$2,289.9 million, of which oil and gas receipts and multilateral, bilateral and commercial loans²⁸ were among the main contributors. Meanwhile, outflows of \$2,936.0 million mainly constituted Central Bank net sales of foreign exchange to authorised dealers (interventions), debt servicing of external borrowing and other Government payments.

27 The traditional measures of reserve adequacy and its related benchmarks are: import cover (3.0 months); reserves to broad money (20.0 per cent); reserves to short term external debt (1:1 ratio).

28 This includes a previously contracted loan from the Corporación Andina de Fomento (CAF) of which US\$ 100.0 million was disbursed within the calendar year 2019; US\$24.0 million from the Unicredit Bank Austria, for the construction of the Point Fortin Hospital.

INTERNATIONAL INVESTMENT POSITION

(Data in this section are in US dollars unless otherwise indicated)

The net international investment position (NIIP) was estimated at \$3,547.6 million at the end of September 2019, an increase of \$624.9 million from the end of 2018 (Table 15). The growth was mainly driven by the increase in assets, which exceeded the accumulation of liabilities.

Over the reference period, the uptick in the stock of assets was primarily influenced by increases in other and portfolio investment. The movement in portfolio assets reflected increased holdings of external debt securities by financial institutions. Meanwhile, the growth in other investment was mainly underpinned by increases

in accounts receivable and loan assets. However, reserves assets declined during the nine-month period, mainly on account of Central Bank interventions in the domestic foreign exchange market.

The movement in the stock of liabilities over the first nine months of 2019 was primarily due to other investment and to a lesser extent direct investment. The expansion in the stock of other investment liabilities was on account of a rise in loans contracted with non-resident financial institutions by domestic entities and higher accounts payable. Meanwhile, higher direct investment liabilities were reflective of increased equity capital and reinvested earnings in domestic entities.

COMPETITIVENESS

Effective Exchange Rates²⁹

Trinidad and Tobago's international price competitiveness – as measured by the trade weighted real effective exchange rate (TWREER)³⁰ – appreciated by 0.8 per cent year-on-year in 2019 (Figure 8). The appreciation in the TWREER was primarily driven by the exchange rate effect which outweighed the inflation effect when compared with the country's major trading partners. Over the year, the trade weighted nominal effective exchange rate (TWNEER) appreciated by 1.9 per cent while the effective inflation rate (EIR) declined by 1.1 per cent. Movement in the TWNEER indicates that the trading partners' currencies depreciated when compared to the domestic currency while the decline in the EIR suggests that the domestic economy's prices rose at a slower pace relative to the average inflation rate of Trinidad and Tobago's major trading partners. The appreciation in the TWNEER would have contributed to the country's exports being less competitive on the international market.

Global Competitiveness Report

Along with movements in exchange rates and consumer prices, institutional factors can also be used to measure an economy's level of competitiveness. The World Economic Forum publishes the Global Competitiveness Report, which ranks countries according to a Global Competitiveness Index (GCI) (Table 15A). The Index assess an economy's level of competitiveness through twelve pillars, which are broadly categorised into four main themes: enabling environment, human capital, markets and innovation ecosystem. The Global Competitiveness Report for 2019, which ranks 141 countries based on the GCI, indicates a minor slippage in Trinidad and Tobago's competitiveness relative to other economies. More specifically, Trinidad and Tobago's ranking was recorded at 79th in 2019, from 78th (out of 140 countries) over the last two years. While there was an improvement in the performance of macroeconomic stability indicators in 2019 relative to 2018, the loss of competitiveness emanated primarily from a fall in the indices of institutions, infrastructure, skills, and business dynamism. However, while Trinidad and Tobago's ranking decreased relative to other countries, the overall score improved marginally to 58.0 in 2019 from 57.9 in 2018. When compared to other CARICOM members, Trinidad and Tobago ranked below Barbados (77 with a score of 58.9), but above Jamaica (80 with a score of 58.3) (Table 15B).

FIGURE 8
TRADE WEIGHTED REAL AND NOMINAL EFFECTIVE EXCHANGE RATES
(2015 = 100)

Source: Central Bank of Trinidad and Tobago

29 The Effective Exchange Rate Indices were rebased to 2015 from 2000 to reflect changes in trading patterns and partners between Trinidad and Tobago and the rest of the world. For further details on this exercise please refer to the January 2020 Economic Bulletin.

30 The TWREER reflects the weighted average of a country's currency relative to a basket of other major currencies, also known as the trade weighted-nominal effective exchange rate (TWNEER), and adjusted for the effects of inflation.

Note: In 2019, a new Global Competitiveness Index (GCI) 4.0 methodology was introduced. The new methodology organises the factors that define a country's productivity into twelve pillars. While maintaining the objective of the previous methodology, the new index reevaluated the determinants of productivity and its measurement, introducing 64 new indicators and retaining 34 of the 98 indicators from the prior model.

CHAPTER NINE – INTERNATIONAL AND REGIONAL ECONOMIC DEVELOPMENTS

INTERNATIONAL ECONOMIC DEVELOPMENTS

Global growth decelerated in 2019 as a result of weakness in global trade and investment, heightened trade policy uncertainty emanating from the US and China and lower commodity prices. World output slowed to 2.9 per cent in 2019 from 3.6 per cent in 2018, according to the IMF January 2020 WEO Update. Economic activity was stymied by tensions between the US and China, which weighed on international trade and investment. Meanwhile, oil prices declined markedly in 2019 as falling demand offset lower production from the Organisation of the Petroleum Exporting Countries (OPEC). Financial markets were volatile in 2019 in the face of protectionist policies implemented particularly by the US and worsening global prospects. In addition, capital inflows to EMDEs were subdued, particularly in the second half of 2019, reflecting increased risk aversion by investors. In light of weaker growth and muted inflationary pressures, central banks across AEs and EMDEs loosened monetary policy.

In 2019, the US economy lost some momentum as the boost from the tax cuts in 2018 faded, coupled with a slowdown in business investment and exports. However, consumer spending remained resilient, supported by strong labour market conditions – with the unemployment rate at a five-decade low – and solid wage growth. Despite higher import tariffs, inflation as measured by the core personal consumption expenditure price index (PCEPI), remained below the US Federal Reserve (Fed) target rate of 2.0 per cent.

Meanwhile, real GDP growth was stymied in the UK owing to Brexit-related uncertainties and weaker global growth. In particular, elevated uncertainties about the UK's departure from the European Union constrained business investment, while softening global demand weighed on the UK's manufacturing sector. Inflationary pressures eased during the second half of 2019 – falling below the Bank of England (BoE) 2.0 per cent inflation target – due to lower regulated energy prices. In other developments, Mr. Boris Johnson was elected as Prime Minister of the UK in December 2019, which generated some measure of certainty that Brexit issues would be resolved in the short run. The UK eventually withdrew from the European Union on January 31, 2020.

Economic activity in the Euro Area deteriorated amidst ongoing weakness in international trade, which particularly affected the manufacturing sector and dampened investment growth. Domestic demand remained resilient, however, supported by employment gains and wage increases. In 2019, inflation was subdued, although higher energy prices in November and December 2019 pushed up prices in the final quarter.

The Japanese economy registered stronger growth in 2019. Despite the increase in the Consumption Tax on October 1, 2019 and the destruction caused by Typhoon Hagibis³¹ less than two weeks later, the growth in real GDP was underpinned by private consumption and public spending. Notwithstanding the pick-up in growth, inflationary pressures remained muted throughout 2019.

31 See Box 2: Geopolitical Tensions and Natural Disasters in the Global Environment.

Growth in EMDEs slowed, reflecting lower trade flows, geopolitical tensions and country-specific factors. Based on the IMF estimates, economic growth for the EMDEs moderated to 3.7 per cent in 2019 from 4.5 per cent in 2018. Economic activity in India was held back by a slowdown in private consumption while lower domestic demand and heightened trade tensions with the US, restrained China's economic activity to its lowest rate since 1990 (3.9 per cent) (Table 17).

Meanwhile, the decline in commodity prices, oil production cuts and continued international sanctions were responsible for the deceleration of Russia's growth. Similarly, real GDP growth in Brazil was hampered by lower mining activity together with slower exports to China. In 2019, consumer prices remained within their targets for Russia and Brazil³². However, higher food prices pushed inflation above the PBoC and RBI target rates by December 2019.

The downturn in global growth prompted a more accommodative monetary policy position amongst the AEs and the EMDEs. The US Fed concluded its balance sheet reduction in August 2019 and lowered the target range for the federal funds rate in July, September and October, totalling 0.75 basis points. At the end of 2019, the Fed's benchmark funds rate stood in a range of 1.50 to 1.75 per cent. Moreover, the European Central Bank (ECB) introduced quarterly targeted longer-term refinancing operations (TLTRO III) and reduced the interest rate on the deposit facility in September 2019, and restarted its asset purchase programme (APP) in November 2019. The majority of EMDEs cut interest rates with the aim of stimulating domestic economic activity. In particular, the People's Bank of China (PBoC) introduced the Loan Prime Rate (LPR) at 4.25 per cent in August 2019, 10 basis points lower than the previous benchmark lending rate, while the Reserve Bank of India (RBI) cut its key interest rate on five occasions during 2019.

REGIONAL ECONOMIC DEVELOPMENTS

Growth in the Latin America and the Caribbean (LAC) region was weighed down by external and domestic factors. The slowdown in global activity along with lower international commodity prices constrained real GDP growth within the region. In Latin America, domestic factors affected economic activity, such as mining disruptions in Chile and lower oil production in Mexico. Growth in the LAC region decelerated to 0.1 per cent in 2019 from 1.1 per cent in 2018, according to the IMF January 2020 WEO Update. Against this backdrop, several central banks lowered their monetary policy rates during 2019, namely, Chile, Peru and Mexico. Inflation accelerated in Chile and Colombia partly reflecting the exchange rate pass-through to consumer prices. However, consumer prices decelerated in Mexico and Peru mainly on account of a slowdown in food prices.

32 Central Bank inflation target rates and ranges for selected Emerging Market and Developing Economies: China (3.0 per cent), Russia (4.0 per cent), Brazil (4.25 +/-1.5 per cent), India (4.0+/-2.0 per cent).

In the Caribbean, economic performance was mixed during 2019 (Table 18). In Jamaica, real GDP growth moderated in 2019 mainly on account of slowdowns in mining and quarrying, construction and agriculture, forestry and fishing. Notwithstanding weaker activity, unemployment was recorded at an all-time low of 7.2 per cent in October 2019 public debt decelerated and the stock of international reserves continued to increase. Jamaica's inflation remained below the upper bound of the Bank of Jamaica's (BOJ) medium term target of 4.0 to 6.0 per cent for the first eleven months of 2019, but it rose sharply to 6.2 per cent in December 2019, driven by higher food and energy prices. Moreover, Jamaica completed its three-year Stand-By Agreement with the IMF in November 2019³³. In other developments, the Guyanese economy was supported by the construction and service sectors, while tourism and construction activity underpinned growth in the Eastern Caribbean Currency Union (ECCU). The Barbados economy continued to improve under the Barbados Economic and Recovery Programme (BERT), due to strong tourism activity. However, the gains in the tourism sector were partially offset by weak private sector investment and consumer demand. Meanwhile, international

reserves improved markedly, reflecting borrowing from international financial institutions as well as the on-going suspensions of commercial debt payments. In December 2019, the IMF approved another drawdown of US\$48.0 million for Barbados, bringing the total disbursement from the IMF to US\$145.0 million. Overall, Caribbean countries continued to be challenged with unemployment, high levels of sovereign debt, persistent fiscal deficits and negative external current account balances (Table 19).

Monetary policy was loosened in Jamaica but remained unchanged in the Eastern Caribbean Central Bank (ECCB) and Barbados. The BOJ reduced its benchmark interest rate on four occasions to a historic low of 0.50 per cent by December 2019 from 1.75 per cent in January 2019, with the aim of stimulating private sector credit and ensuring inflation reaches its medium term target. Meanwhile, the ECCB and the Central Bank of Barbados maintained their monetary policy stance in 2019; the former kept the minimum savings rate and deposit rate steady at 2.0 per cent and 6.5 per cent, respectively and the latter kept its securities reserves ratio for commercial banks at 17.5 per cent in 2019.

CHAPTER TEN – INTERNATIONAL COMMODITY MARKETS

ENERGY COMMODITY PRICES INDEX

The Energy Commodity Prices Index (ECPI)³⁴ declined to an average of 83.1 in 2019, compared to 99.0 in 2018. Most commodities monitored by the index incurred significant price declines over the course of 2019.

Crude oil prices declined 12.0 per cent in 2019 amid global trade uncertainty, an oversupplied market and geopolitical tensions. Crude oil markets were heavily oversupplied in 2019, as production levels increased in the US. In addition, ongoing trade tensions between the US and China resulted in reduced demand globally. West Texas Intermediate (WTI) prices averaged US\$57.01 per barrel in 2019, compared to

US\$64.82 per barrel in 2018. The decline in crude oil prices passed through to other commodities measured in the ECPI, inclusive of motor gasoline (9.4 per cent), gas oil (7.6 per cent) and jet fuel (7.0 per cent).

Global natural gas markets were also weaker in 2019. The Henry Hub natural gas price declined 18.6 per cent year-on-year to US\$2.57 per mmbtu, on account of ample supplies of natural gas on the global market and dampened demand caused by milder weather conditions. The fall in natural gas prices led to declines in other downstream commodities, inclusive of methanol (23.5 per cent), propane (38.0 per cent) and ammonia (23.2 per cent).

34 The ECPI is a summary measure of the price movements of Trinidad and Tobago's top ten energy-based commodity exports. Developed in a collaborative effort between the Energy Chamber and the Central Bank, the series is based on export values in 2007 and complements other available price indicators, including individual commodities and sectoral export price indices prepared by the Central Statistical Office. For further details on the computation of the Energy Commodity Prices Index (ECPI), see Finch, K. and Cox, D. 2010. The Energy Commodity Price Index. Central Bank of Trinidad and Tobago, Economic Bulletin, Volume XII No. 2. pp.84.

1 Petrotrin's Refinery was closed in November 2018. Therefore, refinery capacity (estimated at 168,000 barrels per day prior to its closure) and capacity utilisation are not applicable from 2019.

2 Utilisation refers to gas sales and does not include natural gas used in own consumption.

* For the period January to November 2019.

** For the period January to October 2019.

1 Required reserves comprise the statutory cash reserves requirement which was reduced from 14 per cent in 2003 to 11 per cent effective September 15, 2004. In February 2008, the rate was increased to 13 per cent, with further increases in July 2008, to 15 per cent and then in October 2008, to 17 per cent. Additionally, a secondary reserve requirement of 2 per cent was introduced on a temporary basis, effective October 04, 2006. The secondary reserve requirement on commercial banks' prescribed liabilities was discontinued with effect from August 02, 2018.

2 Represents the excess/shortage as an average through the quarter.

SOURCE: Central Bank of Trinidad and Tobago

- 1 Annual data refer to the average of the quarterly averages for the respective years, except for the Bank Rate, Repo Rate, the Reverse Repo Rate and the Treasury Bill Rate which reflect the end of quarter/year position.
- 2 In May 2002, the Central Bank introduced a system of announced overnight repurchase or 'repo' rates for short-term government paper. The repo rate is the Bank's key policy interest rate and applies to collateralised overnight financing provided to commercial banks. The reverse repo rate is paid on occasions that the Central Bank offers to take overnight funds from commercial banks and is set as the repo rate less 50 basis points.
- 3 The Mortgage Market Reference Rate (MMRR) was introduced by the Central Bank on December 01, 2011 and represents a reference mortgage rate against which residential mortgages can be priced and re-priced.
- 4 Includes Finance Houses and Trust and Mortgage Finance Companies and represents rates for licensed institutions only.

1 Totals may not sum due to rounding.

2 This table is an analytical presentation of the Balance of Payments and is presented in accordance with the IMF's Balance of Payments and International Investment Position Manual, Sixth Edition (BPM6). Refer to Box 3 of the Economic Bulletin, March 2017 for a Technical Note on the Transition to BPM6.

The following financial account movements are represented with a negative sign:

- A decrease in assets (inflow)
- A decrease in liabilities (outflow)
- A net inflow in net balances

The following financial account movements are represented with a positive sign:

- An increase in assets (outflow)
- An increase in liabilities (inflow)
- A net outflow in net balances

* Energy goods data for 2011-2019 comprise estimates by the Central Bank of Trinidad and Tobago.

** Exports and imports are reported on a FOB (Free on Board) basis.

*** Includes petroleum, petroleum products and related materials. Energy exports include exports of petroleum, petroleum products and related materials and the exports of petrochemicals.

**** Other Services consists of manufacturing services on physical inputs owned by others, maintenance and repair services n.i.e., construction, financial services, charges for the use of intellectual property n.i.e., other business services and government goods and services n.i.e.

^ Other investment comprise currency and deposits, loans, insurance, pension, and standardised guarantee schemes, trade credit and advances, other accounts receivable/payable and special drawing rights (liabilities).

^^ End of Period.

1 International reserves have been revised to include Trinidad and Tobago's reserve position in the IMF. International reserves are defined as external assets that are readily available to and controlled by monetary authorities for direct financing of payments imbalances, for indirectly regulating the magnitudes of such imbalances through intervention in exchange markets and for other purposes. Typically, they include securities, gold, IMF special drawing rights (SDRs), a country's holding of foreign currency and deposits, reserve position in the IMF, and other claims (Balance of Payments Manual 6th Edition Paragraph 6.64).

**CALENDAR OF
KEY ECONOMIC EVENTS**

CALENDAR OF KEY ECONOMIC EVENTS

JANUARY – DECEMBER 2019

JANUARY

14. German-backed, Barbados-based renewable energy company, MPC Caribbean Clean Energy Company Limited was listed on the Trinidad and Tobago Stock Exchange. It is the first renewable energy company to list on a Caribbean stock exchange and has also been cross-listed on the Jamaican Stock Exchange.

FEBRUARY

21. Seven directors were appointed to the Board of the Central Bank of Trinidad and Tobago for three years. They included Prof. Surendra Arjoon, Richard Duncan, Lancelot Jack, Terrence Walker, Kirk Henry, Lorraine Ferguson and Kern Gardiner.
27. BP Trinidad and Tobago (bpTT) announced its first gas production from the Angelin project. The new platform, bpTT's 15th installation offshore Trinidad and Tobago, has a production capacity of 600.0 million standard cubic feet a day (mmscfd).

MARCH

1. The Mortgage Market Reference Rate (MMRR) remained at 3.00 per cent.
13. Republic Financial Holdings Limited (RFHL) announced the acquisition of Cayman National Corporation Limited (CNC) through its wholly-owned subsidiary, Republic Bank Trinidad and Tobago (Barbados) Limited. Republic purchased approximately 74.99 per cent of CNC-issued shares for US\$6.25 per share at a total cost of just under US\$198.5 million.
29. The Central Bank of Trinidad and Tobago maintained the Repo rate at 5.00 per cent.

MAY

13. National Commercial Bank Financial Group Limited (NCBFG) and its wholly owned subsidiary National Commercial Bank Global Holdings Limited (NCBGH) completed the acquisition of 74,230,750 ordinary shares in Guardian Holdings Limited (GHL), following the granting of all necessary regulatory approvals in both Jamaica and Trinidad and Tobago, and the closing of NCBGH's take-over bid on May 3, 2019. The shares were taken-up and paid for by NCBGH on May 13, 2019. NCBGH now owns 61.97 per cent of the outstanding shares in GHL.
29. The Government of Trinidad and Tobago signed a new energy agreement with Shell that offers an enhanced revenue package to the Government of Trinidad and Tobago estimated at approximately US\$944.7 million, over the period 2018 to 2027 for the sale of liquefied natural gas.

JUNE

1. The Mortgage Market Reference Rate (MMRR) remained at 3.00 per cent.
21. An Act to amend the Financial Institutions Act, Chap. 79:09, the Securities Act, Chap. 83:02 and the Insurance Act, No. 4 of 2018 was assented to. This Act may be cited as the Miscellaneous Provisions (Financial Institutions, Securities and Insurance) Act, 2019. (Act No. 12 of 2019).
26. Moody's, the International credit rating agency, upheld Trinidad and Tobago's Ba1 long-term issuer and senior unsecured debt ratings, and held the Government Trinidad and Tobago credit ratings stable.

28. The Central Bank of Trinidad and Tobago maintained the Repo rate at 5.00 per cent.

AUGUST

19. The Government of Trinidad and Tobago and Shell T&T Limited signed several agreements pertaining to gas-related issues. These agreements among the Government of Trinidad and Tobago, Shell, National Gas Company Limited (NGC) and Heritage Petroleum Company Limited are expected to create improved economic and financial benefits for Trinidad and Tobago.
24. The Government of Trinidad and Tobago and the Government of Barbados signed a Memorandum of Understanding (MOU) on energy cooperation; a first step in jointly developing any oil or gas that may span the islands shared borders. The MOU also facilitates deep-water exploration near the maritime boundaries of both countries. The MOU is a nonbinding document and represents a commitment to cooperate in energy exploration in their offshore territories.
30. The Mortgage Market Reference Rate for September 1, 2019 remained unchanged at 3.00 per cent.

SEPTEMBER

9. Touchstone Exploration announced that its first exploration well in the Ortoire block discovered natural gas. They encountered four zones with prospective natural gas accumulations. The company has an 80.0 per cent working interest in the license but is responsible for 100.0 per cent of the drilling, completion and testing costs associated with the initial four exploration wells. Heritage Petroleum Company Limited holds the remaining 20.0 per cent working interest.
27. The Central Bank of Trinidad and Tobago maintained the Repo rate at 5.00 per cent.
30. The Central Bank of Trinidad and Tobago announced the acquisition of the traditional insurance portfolios of Colonial Life Insurance Company (Trinidad) Limited

(“CLICO”) and British American Insurance Company (Trinidad) Limited (“BAT”) by Sagcor Life Incorporated (“SAGICOR”), following a transparent, competitive and rigorous bidding process conducted by CLICO/BAT with Central Bank oversight.

OCTOBER

22. The 2019-2020 budget was passed in the House of Representatives.
31. Republic Financial Holdings Limited (RFHL) closed its acquisition of seven Scotiabank operations. Following a receipt of approval from the Central Bank of Trinidad and Tobago, the Eastern Caribbean Central Bank, the Central Bank of Curacao, St. Maarten, and the execution of the Banking Business Vesting Orders in five of the Eastern Caribbean territories, RFHL formally acquired Scotia’s operations in Anguilla, Dominica, Grenada, St. Kitts & Nevis, St. Lucia, St. Maarten, and St. Vincent & the Grenadines.

NOVEMBER

11. The Australian energy company, Broken Hill Propriety Company Limited (BHP), announced a 3.5 trillion cubic feet gas discovery in the northern deep-water area of Trinidad and Tobago.
13. The Chinese Government and the Government of Trinidad and Tobago signed a framework agreement for a concessional loan to develop the Phoenix Park Industrial Estate. At least 1,000 people will be employed in the construction stage, and when the entire park is filled, some 5,000 people are expected to get jobs. The value of the loan is US\$104.0 million.
15. bpTT announced a gas discovery with their Ginger exploration well. This exploration well was drilled into two untested fault blocks east of the Cashima Field in water less than 300.0 feet, approximately 50.0 miles off the South-East coast of Trinidad. The well was expected to be completed by the end of November 2019 and will continue to be evaluated following the completion of drilling operations.

DECEMBER

1. The Mortgage Market Reference Rate as at December 1, 2019 remained unchanged at 3.00 per cent.
7. An Act to amend the Proceeds of Crime Act, Chap. 11:27 and the Central Bank Act, Chap. 79:02 was assented on this date. This Act may be cited as the Miscellaneous Provisions (Proceeds of Crime and Central Bank) Act, 2019. (Act No. 22 of 2019).

The Finance Minister disclosed that over 80.0 million existing \$100 cotton bills will be phased out of the banking system. He made the announcement while debating the Miscellaneous Provisions (Proceeds of Crime and Central Bank) Bill 2019.

16. Canadian energy company Touchstone Exploration announced a significant crude oil discovery in its onshore Cascadura field

in Ortoire. Cascadura is a joint project of Touchstone, which has an 80.0 per cent working interest and Heritage Petroleum, which has 20.0 per cent. Touchstone said the results far exceeded any pre-drill expectations.

17. The ANSA McaAL group announced the acquisition of the Barbados-based Trident Insurance Company Limited. ANSA McAL (Barbados) Limited announced it has acquired shares of Trident which was established in 1979 and writes all classes of general insurance including motor, marine, property and liability.
28. The Central Bank of Trinidad and Tobago maintained the Repo rate at 5.00 per cent.
31. The \$100 cotton bill ceased to be legal tender after this date.
